

AI + Academics

an infographic for students, by students,
from the International Center for
Academic Integrity (ICAI)

1

WHAT IS AI?

Artificial Intelligence (AI) refers to the ability of machines or computer systems to mimic certain human capabilities, e.g.:

- understanding language
- writing
- analyzing data
- learning how to do these things better over time, with “training”

2

ICAI PERSPECTIVE

The ICAI states AI may potentially support student learning and development when used **ethically and appropriately**.

What does that look like exactly?

3

INSTITUTIONAL EXAMPLE

“AI can help reduce the burden of routine or repetitive tasks, [like the automatic transcription of lectures and grammar or spell checks], allowing for more focus on learning and research.” - Mount Royal University Library

4

DO'S & DONTS

DO

- Do be wary of what info you enter into AI chatbots
- Do experiment with using AI to support your learning (e.g., making memorization tools)
- Do learn about the features and limits of AI

DON'T

- Don't use AI to cheat
- Don't enter confidential or sensitive information into AI chatbots
- Don't forget that AI can produce biased or inaccurate results
